

### General Information

EZConnect is an automated fleet fueling data capture and management system that simplifies fuel delivery in the field and streamlines accounting procedures in the office. EZConnect identifies vehicles and equipment at a fueling site, verifies the customer and the type of fuel required, records the delivery data, and transfers the delivery data to your back office software a spreadsheet (or another type of accounting software) on your office computer.

Automating your fueling transactions eliminates many of the errors caused by lost tickets and data entry errors, and it shortens fueling times and processing time by eliminating the need for hand-written fueling tickets and manual data entry. EZConnect also includes software for your office PC where you can create and manage every aspect of the EZConnect database.

EZConnect is deal for fueling ground support equipment at an airport, construction sites, or any other fleet fueling application. It can control one, two, or three metering systems per delivery vehicle.

### Benefits

- Shorten fueling times
- Prevent misfuelings
- Prevent fuel theft
- Deliver to multiple customers without stopping or changing accounts
- Simplify accounting
- Reduce processing time and data entry errors
- Improve preventative maintenance
- Audit fleet performance according to fuel burn and fuel consumption

### Features

- Identifies vehicle, customer, and type of fuel required
- Activates the correct metering system for fueling
- Tracks and records transaction data
- Prints on-site delivery summaries
- No manual data entry, illegible handwritten fuel records, and lost records
- Wirelessly transmits fueling data to your back office *available*
